

Objective:

As we mentioned, here is a quick coding challenge. It's important to note that it's by no means a test...we just want to get a sense for how you write code and solve problems using the open APIs from The Movie DB. We would like you to use HTML, CSS and Javascript to read the API and display (actors, movies, reviews, and/or discussions) in an organized way. In addition, you should add in some sort of sorting mechanic to the front-end. Feel free to use any frameworks you would like to achieve the task.

API Key

API Key: ddb907d69f1671fabdfd75c40b664a37

Example request looks like:

https://api.themoviedb.org/3/movie/550?api_key=d39943d3ef798bdf3e21f87c13f3f8e
